First Office Action on the Merits

Specification

1. The disclosure is objected to because of the following informalities: containing a flow chart (see MPEP § 608.01(VI)). Drawings are requested in accordance with 37 CFR 1.81.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim et al. (US 2002/0025951 or WO 01/47945) in view of Berge et al.

Kim et al. teaches the instantly claimed compound, i.e., 17 α -acetoxy-21-methoxy-11 β -(4-N,N-dimethylaminophenyl)-19-norpregna-4,9-diene-3,20-dione and its antiprogestational properties (see US 2002/0025951, see sections 0001, 0005-0007, 0024, 0028-0031 and Examples IX; WO 01/47945, see Abstract; page 20 and Figure 2, compound #11).

The instant claims differ from the reference by reciting specific salts, i.e., hydrochloride or hydrobromide salt thereof. However, the conversion of pharmaceutical agents into a salt form is routine in the pharmaceutical art. As discussed by Berge et al., the chemical, biological, physical and economic characteristics of medicinal agents can be manipulated and optimized by conversion to a salt form (see the entire article). Berge also teaches several commercially marketed salts, including the hydrochloride and hydrobromide salts that have FDA approval (see page 2, Table I). The claimed salts are prima facie obvious based on the teachings of the prior art and the level of skill of the ordinary artisan in the pharmaceutical art.
